

# Welcome to ArcheryKeeper!

This app is designed to make keeping your archery scores as easy as tapping a button. Here is your quick-start guide to using the app.

## 1. Setting Up Your Round

When you first open the app, you will be on the **Round Setup** screen.

1. **Select Round Type:** Tap the dropdown menu that says "-- Please Select Round Type --" and choose the game you are playing (like IBO, ASA, Vegas, or NFAA). *Note: If you want to build your own specific round, choose "Custom" and see the **Custom Round Mini-Guide** at the bottom of these instructions!*
2. **Number of Targets:** For some rounds, a plus (+) and minus (-) button will appear. Tap these to set how many targets you are shooting today.
3. **Add Shooters:** Tap the "Shooter Name" box, type a name, and tap the green + **Add Shooter** button. Repeat this for everyone in your group.
4. Tap the big green **START ROUND** button at the bottom.

## 2. Keeping Score

Once the round starts, scoring is designed to be big and easy to read.

- **Entering Scores:** You will see big, colored number buttons at the bottom of the screen. Simply tap the score for each arrow you shoot.
- **Switching Shooters:** The app will automatically move to the next person once you enter all your arrows for that target (called an "End"). If you need to skip someone manually, tap the blue **Next >** button.
- **Watching the Score:** Your total score is clearly displayed at the top left, and your score for the current target is on the top right.

## 3. Fixing Mistakes

Mistakes happen! Here are two easy ways to fix them:

- **The Quick Fix:** If you just tapped the wrong score, tap the dark **Undo** button in the middle of the screen. It will erase your last tap.
- **Fixing Past Scores:** 1. Tap the **Scorecard icon** (it looks like a little list/table) at the very top right of your screen. 2. Find the wrong score on the table and tap on the tiny colored arrow numbers. 3. A new window will pop up letting you replace the wrong score with the right one. Tap **Done** to save.

## 4. Editing Names or Player Order

- Need to fix a spelling mistake? Tap the **Scorecard icon** at the top right, then tap the little pencil icon next to the shooter's name.
- Need to change who shoots first? On the main scoring screen, tap the **Users icon** (it looks like two people) at the top right. Use the up and down arrows to change the order.

## 5. Viewing and Sharing Scorecards

When you finish your round, or whenever you want to check the full math:

1. Tap the **Scorecard icon** at the top right.
2. You will see a clean table of everyone's scores. Tap a person's name at the top to see their specific scorecard.
3. **To Share:** Scroll to the bottom of the scorecard.
  - Tap **Share Image** to save a picture of the scorecard to your phone or send it in a text message.
  - Tap **Copy to Share** to copy the scores as plain text to paste into an email or message.

## 6. Starting a New Game

Ready for a new round? Tap the **Reset icon** (the circular arrow) at the very top right of your screen. This will clear out the current game so you can start fresh.

## Custom Round Builder Mini-Guide

If you are shooting a unique format—like mixing different distances at an IFAA field event or changing scoring rules halfway through—the Custom Round Builder lets you create exactly what you need.

### How to build your round:

1. On the Setup screen, tap the Round Type dropdown and select **Custom Round Builder...**
2. A blue "Custom Round" box will appear. By default, it gives you one "Target/Distance" to set up.
3. **Name it:** Tap where it says "Target/Distance 1" and type a name (for example, "20 Yard Field Target" or "3D Target 1").
4. **Choose the Rules:** Tap "Choose Scoring Rules" to pick the point system for this specific target (like IBO 11-10-8-5-0 or a standard 5-0).
5. **Set the Math:** Type in the **Total Ends** (how many times you are shooting this target) and **Arr/End** (how many arrows you shoot each time). The app will automatically calculate your X-ring value, but you can change it at the bottom if needed.

6. **Add More:** If you are moving to a different target, distance, or scoring style next, tap the **+ Add Another Target/Distance** button and repeat the steps above.

#### Managing your custom list:

- Made a mistake? Tap the red **Trash Can** icon to delete a target.
- Need to reorder them? Use the **Up and Down Arrows** to shift the target order around before you start shooting.
- Once everything looks right, add your shooters and hit **START ROUND!** The app will automatically switch your scoring buttons and rules as you move from one custom target to the next.
